HYDRA ALKA
INTERNATIONAL PRIVATE LIMITED
HEALTHY WATER FOR HEALTHY LIFE

PREVENTS SCALE
BUILD-UP

PROTECTS YOUR
APPLIANCES

SOFTER WATER
BETTER LIFE

SAFE & CHEMICAL
FREE

HARD WATER CONTAINS EXCESS

CALCIUM & MAGNESIUM, WHICH CAUSES:

1

Dry, rough skin

2

Hair fall & dull hair

3

White scale on taps & tiles

4

Damage to geyser & washing machine

5

More soap, shampoo & detergent usage

6

Poor Water Pressure

7

High Maintenance Cost

What Is HYDRA ALKA Electronic Water Conditioner?

HYDRA ALKA is a non-salt, non-chemical electronic water conditioner that uses advanced electromagnetic technology to **prevent scale formation and break existing limescale**.

No salt

Japanese
Cathode-Anode
Technology

Safe for
daily use

No Magnet

1000-4000
LPH Capacity

No water
wastage

No chemicals

Zero
Maintenance

HYDRA ALKA

How It Works

Chemical-Free Water Treatment

Works without salt, chemicals, or filters.

Prevents Scale Build-up

Protects pipelines, geysers, taps, and appliances from hard water scale.

Eco-Friendly Technology

No water wastage and no harmful discharge.

Easy Installation

Quick setup without plumbing modifications.

Low Power Consumption

Energy-efficient operation for 24/7 use.

Maintenance-Free

No regular servicing or replacement parts required.

HYDRA ALKA

For Your Body

- Soft & smooth skin
- Reduced hair fall
- Shiny, manageable hair
- Better bathing experience

For Your Home

- No scale on bathroom fittings
- Shiny tiles & glass
- No stains on clothes

Key Benefits

For Appliances

- Longer geyser & washing machine life
- Better heating efficiency
- Less maintenance & repair cost

For Your Industry

- Prevents hard scale buildup in pipelines and machinery
- Reduces cleaning and maintenance costs
- Keeps operations running smoothly

How HYDRA ALKA Anode–Cathode Technology Works

HYDRA ALKA Water Conditioner uses advanced anode–cathode electrochemical technology to control hard water scaling without using salt or chemicals.

When hard water flows through the HYDRA ALKA chamber, a low-voltage electric current is applied between the anode (+) and cathode (–) electrodes.

At the cathode, calcium and magnesium ions responsible for hardness are attracted and their crystal formation behavior changes. Hard, sticky scale-forming crystals are converted into soft, non-adhesive structures.

At the anode, controlled oxidation reactions help prevent mineral bonding on pipe walls and heating surfaces. Hydrogen and oxygen micro-bubbles formed during the process assist in loosening existing limescale deposits.

"HYDRA ALKA conditions hard water by electrochemically altering mineral crystallization, preventing scale adhesion without removing essential minerals."

HYDRA ALKA

Ideal For

HYDRA ALKA Electronic Water Conditioner is ideal for homes, apartments, villas, salons, hotels, offices, hospitals, and commercial spaces where hard water causes scaling problems. It is perfect for protecting geysers, water heaters, washing machines, plumbing lines, and bathroom fittings, while providing a maintenance-free, eco-friendly solution without using salt or chemicals.

HYDRA ALKA

Comparison: HYDRA ALKA vs Salt Softener

HYDRA ALKA Electronic Conditioner	Salt Softener
No salt required	Requires salt
No water wastage	High water wastage
No maintenance	Regular maintenance
Eco-friendly	Not eco-friendly
Easy installation	Complex setup

HYDRA ALKA

Where Can It Be Installed?

- Main inlet line
- Terrace
- Utility area
- Before overhead tank
- Individual appliances

Ideal For

- Homes & Apartments
- Villas & Bungalows
- Salons & Spas
- Hotels & Restaurants
- Commercial buildings

Why Go Electronic?

-  Save water
-  Save money
-  Save energy
-  Protect appliances

HYDRA ALKA – Smart Technology for Smart Homes
Install Once. Enjoy Scale-Free Water.
